

HAZMAT ROLLOVER TANKER ST/ST-PRO

Versatile. Hands-On. Hazmat Training.

Symtech's 16-ft Hazmat Rollover Tanker ST and ST-PRO deliver unparalleled design elegance, ease of setup, and durability. The Tanker includes multiple Leak Simulations, including a Chlorine Dome, Gasoline Dome, and (4) unique tanker leak scenarios. The Rollover Tanker includes a vertical ladder and cat-walk. It is counter-balanced, enabling it to be set up vertically or in multiple tipped positions to enable varied training scenarios, including challenging positions. The simulator can be used on the ground with the included SS casters, mounted on footings, or re-locatable using the Optional Vehicle Transporter.

A wide variety of options are available, including a smoke generation system, grounding and bonding, and hot tapping scenarios. An optional leak tree can be added as well. LPG fires, such as an adjacent flammable liquid fire and split flange, can be added, taking training to another level with live fire elements. Custom accessories are also available, and an on-board power generator and air compressor are available for turnkey applications.
